

V8 -- empirical conditional law of $\log K_t$ given s_t (dense, 12,389,115 tokens, 35 equal-count bins)

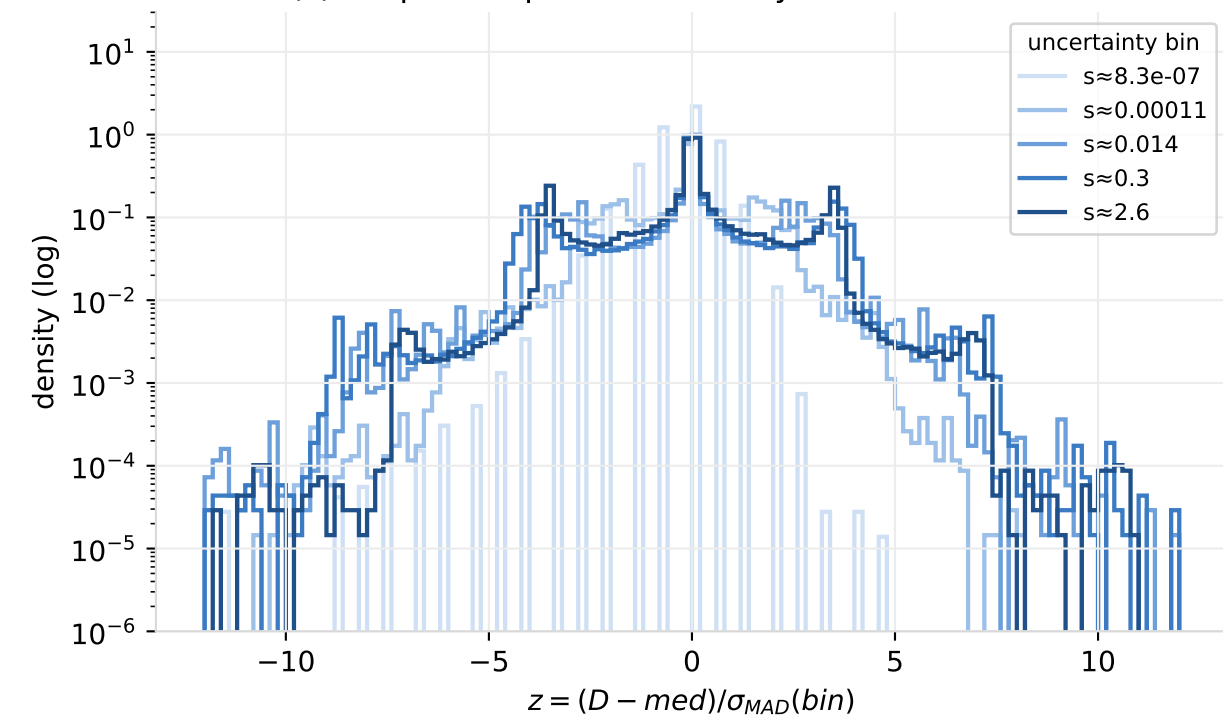

(a) conditional quantile fan of $\log K_t | s_t$

(b) conditional scale law (LS-fitted in log space)

(c) shape collapse: scale family iff curves coincide

(d) tail asymmetry: where the negative skew lives
